

E-COMMERCE SALES ANALYSIS

PERFORMANCE ANALYSIS

Investigating the drivers of declining sales and identifying opportunities for growth

Analysis Period

January 2025 –
June 2026

Dataset

1,500 Sales
Transaction

Tools Used

Microsoft Excel, Power Pivot,
Pivot Table, Pivot Charts

Objective

To analyze sales performance, identify key drivers of decline and provide actionable recommendations for growth.

EXECUTIVE SUMMARY

From Growth to Decline

BrightCart's performance tells a clear story: **sales started strong in 2025 but entered a sustained decline from late 2025.** By June 2026, sales had fallen **71.4% compared with January 2025**, raising the need to understand what was driving the decline. The analysis shows that revenue is concentrated around **digital channels, returning customers, key product categories and a few regions**. At the same time, returns and marketing performance present opportunities for improvement.

The Numbers at a Glance

Total Orders

25.8%

Profit Margin

60%

Sales from Returning Customers

The goal was not only to measure the decline, but to understand where BrightCart can recover growth.

BUSINESS PROBLEM & OBJECTIVES

The Business Question

BrightCart's sales decline is clear but **what is driving it?**

To answer this, the analysis moves from the overall sales trend into **customers, channels, products, regions, marketing and operations.**

I focused on four questions:

01. WHEN?

When did the decline become significant?

02. WHERE?

Which channels, regions and categories drive revenue?

03. WHO?

What does customer behaviour tell us about the decline?

04. WHY?

What marketing and operational factors may be contributing?

Objective

Turn the sales decline into actionable business insights and identify opportunities for recovery.

DATA & METHODOLOGY

From Raw Data to Business Insight

The analysis started with **1,500 e-commerce transactions** covering January 2025 to June 2026.

I prepared the dataset, standardized inconsistent values and created the fields required for monthly and performance analysis.

I then analyzed the business across five areas:

SALES

Revenue, profit, orders & monthly trends

CUSTOMERS

Customer type & segment behavior

CHANNELS

Sales & marketing channel performance

PRODUCTS

Categories & top-performing products

OPERATIONS

Returns, delivery & order status

Tools

Excel | Power Query | Power Pivot | PivotTables | Pivot Charts

Methodology flow:

Clean → Transform → Analyze → Visualize → Recommend

DASHBOARD & ANALYSIS

The Dashboard

The analysis was translated into a **three-page interactive Excel dashboard** to move from the overall performance picture to the factors behind it.

BRIGHTCART COMMERCE | KEY INSIGHTS & RECOMMENDATIONS

KEY INSIGHTS

Sales performance has weakened significantly.

Sales declined by **71.4% from Jan-2025 to Jun-2026**, with a sustained downward trend beginning around **Nov-2025**.

The decline affects both customer groups.

Returning customers account for **60% of sales**, but sales from both new and returning customers trend downward, suggesting that the decline is broader than customer acquisition alone.

Digital channels remain critical to revenue.

The **Website and Mobile App generate about 77% of sales**, while the **South region contributes 42%**, making these key areas to protect while exploring growth opportunities elsewhere.

Customer experience may be contributing to revenue loss.

Wrong size/fit is the leading return reason, followed by changed mind and product damage. Meanwhile, sales continued to fall despite fluctuations in marketing spend, indicating that marketing spend alone may not explain the decline.

RECOMMENDATIONS

BrightCart should first investigate the Nov-2025 turning point by reviewing pricing, inventory, conversion and customer activity before and after the decline began.

The company should strengthen customer retention through loyalty incentives, personalized offers and repeat-purchase campaigns, while improving the Website and Mobile App experience.

Reducing preventable returns should be a priority. Better sizing guides, product descriptions, packaging and delivery processes can help improve customer experience and protect revenue.

Finally, BrightCart should optimize marketing efficiency by measuring ROI by channel and using the findings to strengthen high-performing channels and develop underperforming regions.

KEY INSIGHTS

What the Data Revealed

01 | The decline is sustained

Sales fell **71.4% from January 2025 to June 2026**, with the downward trend becoming more pronounced from **November 2025**.

02 | Digital channels drive the business

The **Website and Mobile App account for about 77% of sales**, making digital performance critical to recovery.

03 | Returning customers are valuable

Returning customers contribute **60% of sales**, highlighting the importance of retention and repeat purchases.

04 | Revenue is concentrated

The **South region contributes 42% of sales**, while **Electronics leads categories at 23%**.

05 | Returns reveal operational gaps

Wrong size/fit is the leading return reason, followed by changed mind and product damage.

06 | Marketing alone doesn't explain the decline

Sales continued to weaken despite changes in marketing spend, suggesting that **conversion, pricing, inventory or customer activity** may also need investigation.

The decline is broader than one channel or customer group recovery will require action across the customer journey.

RECOMMENDATIONS & CONCLUSION

Turning Insights Into Action

The analysis points to five priority actions for BrightCart.

01 | Investigate the November Turning Point

Compare pre and post November 2025 performance across **pricing, inventory, conversion and customer activity**.

02 | Protect Returning Customers

Use **loyalty offers, personalized campaigns and repeat-purchase strategies** to protect the 60% revenue contribution from returning customers.

03 | Strengthen Digital Channels

Prioritize the **Website and Mobile App**, focusing on checkout experience, product discovery and abandoned-cart recovery.

04 | Reduce Preventable Returns

Improve **size guides, product descriptions, quality control and fulfillment** to address the leading return drivers.

05 | Improve Marketing Efficiency

Measure **ROI by marketing channel** and redirect spending toward channels that generate stronger commercial results.

BrightCart's sales decline is significant, but the data also shows where recovery can begin: understand the turning point, protect valuable customers, strengthen digital channels and remove operational friction.
